

VEHICLE TESTED

Jaguar I-Pace

EV400 · 2022 · Battery electric (BEV)

KN22 EYG

Vehicle Record

ODOMETER READING	43,400 miles
VIN (LAST 4 DIGITS)	2708
ORIGINAL BATTERY (TOTAL)	90.0 kWh
ORIGINAL BATTERY (USABLE)	84.7 kWh
VEHICLE TYPE	BEV

Test Record

REPORT ID	KN2XH7NDCZ
EXECUTED BY	Grange JLR Hatfield
TEST COMPLETED	19.10.2026 · 11:38
ISSUED ON	19.10.2026

Laboratory Tested Range

PERFORMANCE

TEST	TESTED RANGE	Lab based figures are rarely achieved in the real world but can be used to fairly compare vehicles across the market.
WLTP combined cycle	292 miles	

Real Range Estimates (MILES)

PERFORMANCE · SEE NOTE 2

Low WINTER 176-191 URBAN MOTORWAY 0% 100%	Typical AUTUMN · SPRING 220-239 URBAN MOTORWAY 70% 30%	High SUMMER 242-263 URBAN MOTORWAY 100% 0%
--	---	---

Range estimates for three sets of driving conditions reflecting real world performance. These values may differ from official manufacturer data.

Predicted Range Performance (MILES)

SEE NOTE 3

WLTP tests are carried out in ideal lab conditions and do not reflect real-world performance.

Battery Capacity Warranty

WITHIN THRESHOLD

ORIGINAL TERM

8 years or 100,000 miles

COVER ENDS

When either limit is reached

STATUS

Not expired

MILEAGE REMAINING

56,600 miles

TIME REMAINING

3 years 5 months

Other criteria may apply. Covers excessive loss of battery capacity. Cover for battery faults or failure is separate and may have different limits. See note 4.

Charging Compatibility & Port Location

CHARGING

CONNECTOR

UK PUBLIC CHARGERS

AC SLOW AND FAST

Type 2

90,172

DC RAPID

CCS

24,150

MAXIMUM DC CHARGING RATE

104 kW

PORT LOCATION

Front Left Side

DC charging relates to rapid charging at locations such as motorway services and petrol stations. To view all public chargers in the UK, head to [zapmap.com](#).

Charging Figures (10-80% CHARGE)

TYPE	TYPICAL LOCATION	TIME TO CHARGE	AVERAGE COST
Slow	Home 7.4 kW · night	8 h 48 min	£6
Slow	Home 7.4 kW · day	8 h 48 min	£16
Fast	Supermarket	5 h 55 min	£35
Fastest	Motorway	50 min	£51

Average time and cost to charge from 10% to 80% at the time of print. Maximum DC charging rate 104 kW. Charging above 80% is best kept for longer trips to preserve battery condition. Night tariffs give the biggest savings at home.

Further Vehicle Data

5 CHECKS

CHECK	RESULT	DETAIL
Air Quality	CAZULEZ	This vehicle can enter Ultra Low Emission Zones (ULEZ) and Clean Air Zones (CAZ) free-of-charge.
London Congestion Charge	£15/DAY	This EV will need to pay the £15 daily Congestion Charge when travelling into London during certain hours.
Vehicle Classification	ULEV/ZEV	This vehicle is classed as an Ultra Low Emissions Vehicle (ULEV) and a Zero Emission Vehicle (ZEV).
Road Tax / VED	£200/YR	This vehicle will incur road tax of £200 annually.
Original Vehicle Warranty 3 YEARS	WARRANTY EXPIRED	The original vehicle warranty is 3 years. This warranty has now expired due to the age of the vehicle.

Notes & Methodology

1 ClearWatt Battery Scorecard A battery is complex, and a single percentage rarely tells the whole story. Two cars showing the same number can be in quite different health. The Scorecard weighs readings taken directly from the vehicle, such as cell voltages and charging history, with wider checks like software version and recall status, to build one consistent assessment.	2 Real Range Insights Range for three driving scenarios: the most common, the lowest and the highest you can expect from this vehicle. These are estimates and subject to variability. Driving mode, climate control and driving style all affect the range achieved on a full charge. The lab-based WLTP combined range is 292 miles.
3 Predicted Range Performance ClearWatt aggregates data from multiple sources, including our data lake of test results, to plot predicted range performance. These figures are estimates and depend on the future use and treatment of the vehicle. Frequent rapid charging accelerates battery degradation and should be avoided where possible.	4 Battery & Vehicle Warranties Battery capacity cover applies to loss below the manufacturer's stated threshold and is separate from cover for battery faults or failure. Vehicle warranties typically cover the motor, drivetrain, electronics and control systems. Status is shown against the original stated terms. The manufacturer may require more information to validate a claim.

This certificate is an assessment based on data obtained from the vehicle's on-board systems and other industry sources. It is not issued, endorsed, or verified by the vehicle manufacturer. The results represent the battery's condition at the time of testing and do not guarantee future performance, reliability, or lifespan. Any modifications or subsequent changes to the vehicle or its systems may render this certificate invalid.
